Integrating  Projects & Technology

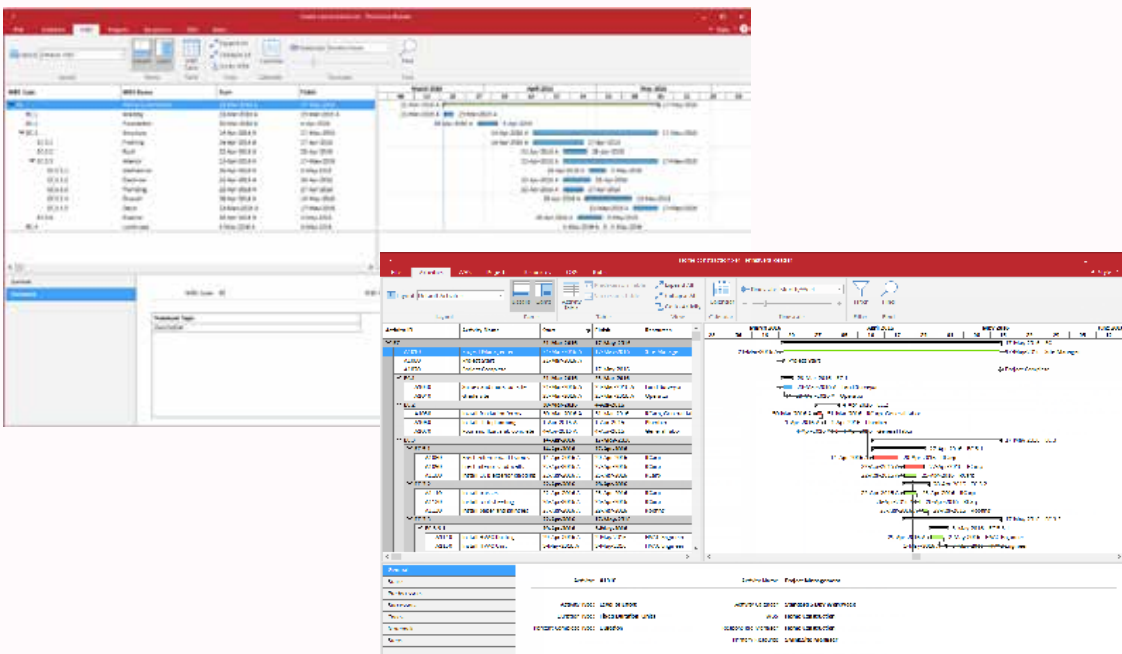

**PrimaveraReader**

## Introduction

PrimaveraReader is a **Windows** application that allows you to **open** and **view** project data exported from Oracle Primavera P6 in **.xer** or **.xls** file format. It is designed to deliver the **well-known view** of project information among all parties involved without having an Oracle Primavera P6 license.

## Intuitive work environment

User can **quickly get started** to work because the PrimaveraReader user interface is very intuitive, as shown on the figure below.

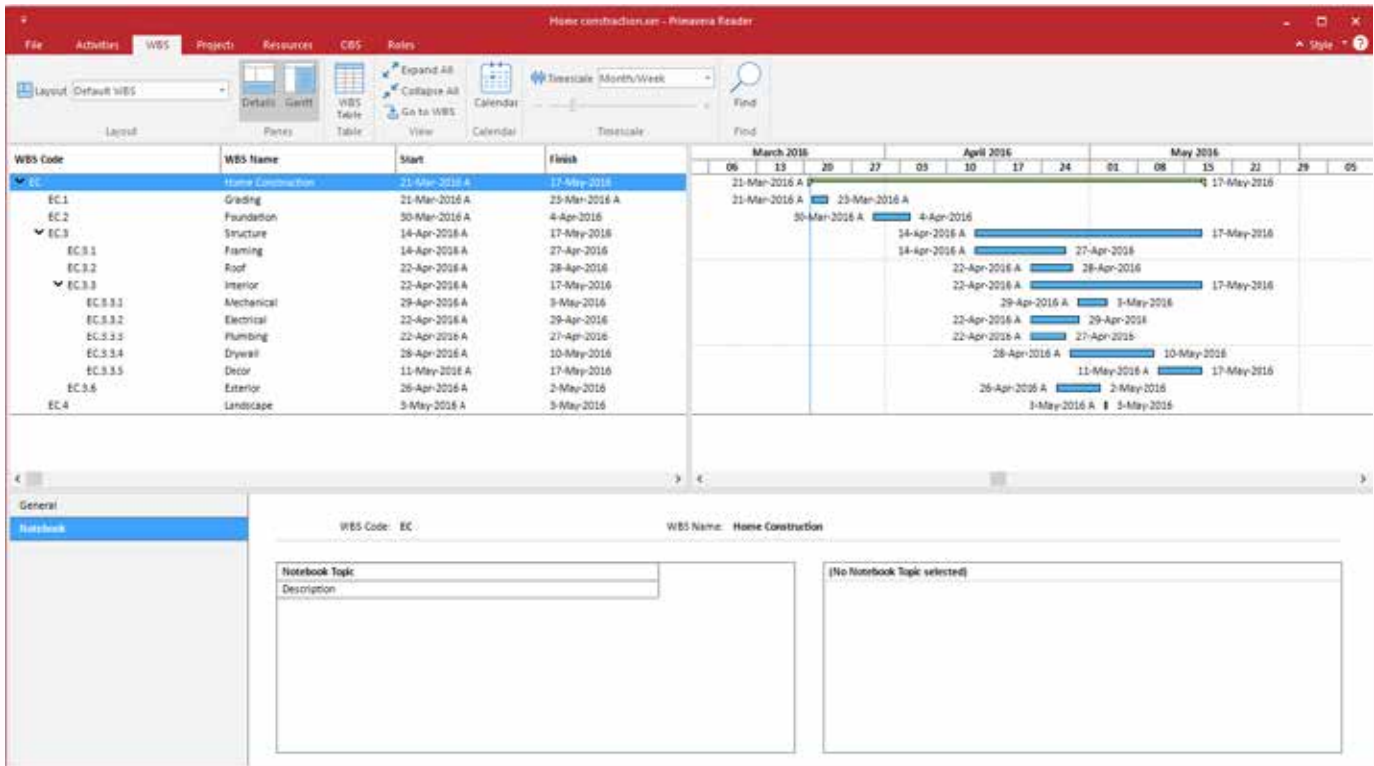

## Key Features

In PrimaveraReader, project participants such as project managers, team members, contractors and sub-contractors can **gain complete visibility** into project progress by using the native views for:

- **Activities**
- **WBS** - Work Breakdown Structure
- **Projects** which represents the Enterprise Project Structure (EPS)
- **Resource** assignments
- **Detail view** of selected item in current view
- **OBS** - Organizational Breakdown Structure
- **Roles view**

All project information given in a particular table view and the corresponding graphical Gantt chart view are based on the assigned **Calendar**. Use one of the standard **layouts** to group and sort data as you need.
