

Box for Documentum

Enhance Documentum with the Cloud

Integrating >>> Projects & Technology

Box offers secure, scalable content sharing from anywhere, on any device – and now, connects to EMC Documentum ECM Suite. Enable employees to work from anywhere and collaborate with external contacts, without compromising your business processes around content.

Empower Your Extended Workforce

Today’s business is no longer limited to a single building in one location. Employees, partners, customers and vendors are literally spread across the globe and need a way to collaborate with each other outside the firewall.

With Box for Documentum, you can sync content between EMC Documentum ECM Suite and Box while preserving the same folder structure, permissions and version history, which lets your employees:

- **Access files from any location, on any device**, including Box’s native iPhone, iPad and Android Apps
- **Invite external contractors or partners** to a shared workspace to collaborate on content
- **View and play content directly in the browser**, including Office documents, images and audio and video files
- **Sync files to their desktops** for offline access

Box for Documentum is available for an additional monthly fee as part of Box Enterprise, which provides businesses with unlimited cloud storage and enterprise-grade cloud security.
